
Expandable Containers

In response to market demand, we have developed the expandable container house, based on a 20ft container, which can expand twice the space after the expansion of the house, saving transportation costs and increasing the use area at the same time.

It is widely used in accommodation, mobile offices, emergency relief, off shore oil&gas sites, construction sites, storage rental market, and homeless projects.

The extended house is made of light steel and the price is 60% lower than that of aluminum folding houses, which is the best choice for an easy home.

This product has been exported to Australia, New Zealand, the United States, the United Kingdom, France, Germany and so on.
